

Rahimtulla Tummalapalli

QA Automation Engineer / SDET

Hyderabad, India | +91 98858 59799 | rahim.test@gmail.com | [linkedin.com/in/rahim-tummalapalli-822509176](https://www.linkedin.com/in/rahim-tummalapalli-822509176)

QA Automation Engineer with 9+ years of experience in logistics, healthcare, banking and revenue management. Right now I'm at DP World working on Cargo Flow, a shipment tracking and visibility platform, where I handle testing for the Flow and Exception services. I mostly automate in Java (Selenium, Rest Assured, Selenide) and TypeScript (Playwright). I also tend to build small tools when I notice the team doing something by hand too often - a Chrome extension for bug reports, a billing pipeline the sales team now runs on their own, a weekly QA status report.

Experience

Senior QA Automation Engineer (SDET), DP World

Jan 2025 - Present | Hyderabad

Cargo Flow is a logistics tracking and visibility platform. I own testing for two of its services - Flow, which handles shipment milestones and events, and Exception, which handles delay and anomaly detection and alerts.

- Own the test strategy, test cases, and API and UI automation for the Flow and Exception services, and sign off releases.
- Deliver a steady stream of user stories every quarter and automate a good chunk of them, alongside regular on-call coverage.
- Handle on-call support and recurring status updates to key clients, including on weekends, and led the root-cause investigation when a client reporting workflow broke.
- Pointed out a gap around shareable links for existing records during a review - the client raised the same point independently not long after, and it turned into a user story. Also flagged a performance concern early on a different story before it turned into a bigger problem.
- Fix regression and flaky test failures, review other engineers' automation pull requests, split up stories across the team based on who has bandwidth, and help newer team members with release notes and sign-off communication.

Innovation & process improvements

- Built a self-service reporting pipeline that moved a report the team used to generate manually into something the business team now runs on its own, cutting turnaround time by a lot.
- Built a Chrome extension that makes raising a bug report faster for the QA team, and ran a session to walk the team through using it.
- Automated a partner onboarding check that used to rely on someone reading a confirmation email, replacing it with a database-driven step that runs unattended.
- Moved credentials (usernames and passwords) out of properties files - previously every small change needed its own pull request. Ran a POC on Key Vault first, but settled on reading directly from Azure DevOps Variable Groups via the API instead, for both local runs and the pipeline, since it was cheaper and simpler to maintain.
- Set up a lightweight recurring QA status report that other teams can start using in about ten minutes - already picked up by another team beyond the one it started with.
- Built an automated pipeline that generates release documentation, cutting out a manual step from every release.
- Piloted a different approach to API test automation to speed up writing new tests, and suggested IDE tooling to help the rest of the team pick it up.

Stack: Java, TypeScript, Playwright, Selenium, Rest Assured, Karate, Postman, Azure DevOps, Chrome Extensions, GitHub, Jenkins

SDET II, Innovaccer

Aug 2022 - Dec 2024 | Hyderabad

Innovaccer builds a healthcare data platform that pulls information from hospitals, clinics and payers into one system for care coordination.

- Went through business requirements and design documents, then wrote and kept the test strategy, test plan and test cases up to date for each release.
- Wrote and maintained Selenium WebDriver and Playwright (TypeScript) scripts for functional and regression testing on a Cucumber framework.

- Set up the automation framework so the same test suites could run across multiple platforms.
- Decided which test cases stayed manual and which ones were worth automating with Rest Assured for smoke, functional and regression runs.
- Did some R&D; on a test scenario design tool and took part in the team's AI initiatives.

Stack: Java, TypeScript, Selenium WebDriver, Playwright, Cucumber, Rest Assured, TestNG, Maven, Extent Reports, GitHub

Senior QA Engineer I, Model N

Apr 2021 - Aug 2022 | Hyderabad

Worked on Global Price Management, a revenue management product for life sciences and high-tech companies covering pricing, incentives and contracts.

- Automated at least two stories every sprint using the Selenide framework and ran them through Jenkins.
- Kept the automation suite close to a 100% pass rate by fixing failures as they showed up.
- Reviewed pull requests from other automation engineers.
- Took part regularly in grooming, daily stand-ups and retrospectives.

Stack: Java, Selenium WebDriver, Selenide, TestNG, Maven, Jenkins, GitHub

Technology Support Specialist, Infosys

Mar 2019 - Apr 2021 | Hyderabad

Client was Bank of America, on the Global Capital Markets team, supporting applications used by the debt and equity capital markets desks.

- Built a Page Object automation framework with Selenium WebDriver and TestNG.
- Identified web elements, wrote scripts against each new build, and generated test summary reports with Extent Reports through Maven.
- Took part in scrum calls and sprint planning.

Stack: Java, Selenium WebDriver, TestNG, Maven, Log4j, Extent Reports

QA / Developer, Arjun Web Solutions Pvt Ltd

Mar 2017 - Mar 2019 | Hyderabad

Worked across two products - a home mortgage application, and Storm Overseas Education, an information portal and Android app for students planning to study abroad.

- Built the Page Object automation framework for both products and ran regression and data-driven test suites with TestNG and Maven.
- Tested REST services with Postman and logged defects in the bug tracking tool.
- Built the Storm Overseas Education Android app and published it on the Google Play Store.

Stack: Java, Selenium WebDriver, TestNG, Maven, Postman, Android

Skills

Languages	Java, TypeScript
UI automation	Selenium WebDriver, Playwright, Selenide, Page Object Model, Page Factory
API testing	Rest Assured, Postman, Karate (POC)
Frameworks & tooling	TestNG, Cucumber, Maven, Log4j, Extent Reports, RAFT
CI / version control	Jenkins, Git, GitHub, Azure DevOps
Other	Chrome extension development, Android, Agile (Scrum), Waterfall
IDEs / OS	IntelliJ, Eclipse, Android Studio; Windows, macOS

Certifications

- Selenium Certified, Infosys (2020)
- Basics of Cloud Computing, Infosys (2021)

Education

Bachelor of Engineering, Mechanical
Swarnadhra College of Engineering & Technology
2012 - 2016
